

# Ohio Landfill Finds Dedicated Partnership

A Valicor Case Study

## Background:

A large Ohio landfill provides collection, transfer, disposal, recycling, and resource recovery services across the state and beyond.

## The Challenge

The landfill's managers knew they needed a reliable and responsible partner to assist in disposing of thousands of gallons of leachate, a waste by-product of every landfill. Leachate is regulated by state and federal laws and must be properly collected and removed.

The landfill generated a varying amount of liquid waste depending on environmental and operational factors and needed a vendor who could accommodate the fluctuations and help the company meet the regulatory requirements of the disposal.

## The Solution

After searching for nearby vendors, the landfill management discovered Valicor Environmental Services. With Valicor's extensive fleet of tankers and strategically located centralized wastewater treatment facilities, it was able to meet the federal, state, and local regulations by responsibly transporting and disposing of the leachate. Valicor drivers also have an excellent working relationship with the landfill staff. In fact, the company depends on them for information like liquid levels in the tanks or possible problems at the leachate sites.

A few years ago, the landfill had a tank with a pipe that hadn't been tightened down properly when installed. Each time the tank's pump turned on, liquid would spray. One of the Valicor drivers called the landfill and told them what was happening, secured the area and ensured the liquids were being withheld by a secondary containment. It's refreshing to work with such a responsible and dedicated partner. We've been working with Valicor for over five years now," says the landfill manager. "They've been doing a fantastic job."
